

EVM is the most comprehensive and cost effective solution, available in the mobile market today, for distribution and management of electronic value, be it: airtime, internet refills, bundles, e-tickets or e-wallet.

From Telco Operators and Service Providers perspective, EVM means increased capillarity, faster time to market, higher revenues at reduced costs and enhanced user experience.

EVM enables a wider uptake of environmental friendly, easy to use services, with availability and convenience of various recharge models.

MANY SOLUTIONS IN ONE

EVM allows flexible purchase options to accommodate various devices and spending patterns with:

- PIN-based or PINless distribution,
- Printed or Virtual vouchers,
- Fixed or Variable denominations.

The distribution of electronic vouchers may be done at all customer touch point interfaces, using a variety of protocols and channels:

- Mobile handset vending, whereby any registered subscriber can become a reseller by using his cell phone,
- Retail Point of Sale terminals, PC-based in-store POS and scanner device with Credit Card Integration,
- Handheld Point of Sale, through handheld PDA or vending machines, for street vending,
- Web based interface vending,
- Banks ATM distribution.

EXTENDED CAPABILITIES

EVM extends beyond traditional systems that provide capabilities in isolation, and offers:

- Best-of-breed interfaces to Electronic Payment systems,
- Dealer and sub-dealer management, with commission and hierarchy,
- Inventory and Sales Management,
- PIN generation function ,
- Bulk printing of customized paper vouchers*.

BANKS ATM DISTRIBUTION

RETAIL POINT OF SALE TERMINALS

MOBILE VENDING

HANDHELD POINT OF SALE

WEB INTERFACE VENDING

BULK PRINTING OF VOUCHERS

** Customized paper vouchers serve as an alternative for the physical scratch cards, without the associated logistics and costs, with subscriber-friendly denominations, transferred electronically and securely to the Point of Sale and printed there.*

FLEXIBILITY AND AGILITY

Based on Service Oriented Architecture methodology, EVM can seamlessly integrate with third party systems and can allow for growth in both volumes of transactions and features.

The EVM graphical user interface can be configured and managed to allow for customized language, currency and tax settings.

Tailored reports can be produced from predefined settings, in different formats for further analysis.

Moreover and unlike more expensive electronic voucher distribution offerings, EVM maintains a low cost operation with flexible pricing models, and can be offered with an alternative hosted deployment that increases scalability, eliminates CAPEX and reduces installation time.

With EVM, ForeLogix brings a solution built on the principles of Service Oriented Architecture.

EVM's extensive
**FUNCTIONALITY,
ROBUSTNESS,
SCALABILITY,
SPEED OF INTEGRATION**

are tangible proofs of the value creation ForeLogix brings to its clients through adopting Service Oriented Architecture as an Enabler of the Agile Enterprise.

ENHANCED SECURITY

EVM is a highly secure solution using:

- Best of breed encryption,
- Voucher lifecycle management,
- Users permission and access control,
- Audit trails of all transactions, jobs, processes.
